E1-1 write a Python program to encrypt and decrypt a message using Caesar cipher.

E1-2 Write a Python program to encrypt and decrypt a message using a One-Time Pad.

E1-3 Write a Python program to encrypt and decrypt a message using a Monoalphabetic Substitution Cipher.

E1-4 Write a Python program to compute the GCD of two numbers using the Euclidean Algorithm.

E1-5 Write a Python program to decrypt a Caesar Cipher encrypted message using brute-force attack.

E1-6 Write a Python program to encrypt and decrypt a message using the Playfair Cipher.

E1-7 Write a Python program to encrypt and decrypt a message using the 2x2 Hill Cipher.

E1-8 Write a Python program to encrypt a message using a Transposition cipher with double encryption.

E1-9 Write a Python program to encrypt and decrypt a message using the ElGamal cryptosystem.

E2-1 Write a Python program to encrypt and decrypt a message using DES.

E2-2 Write a Python program to encrypt and decrypt a message using the RSA algorithm.

E2-3 Write a Python program to simulate the Diffie-Hellman key exchange.

E2-4 Write a Python program to perform modular arithmetic operations using a primitive root.

E2-5 Write a Python program to compute the GCD of two numbers using the Extended Euclidean Algorithm.
